Work Chair

Product Information

Description
This chair has 3 sizes and a Pellicle® material that conforms to the user's body and retains its original shape when unoccupied. The material is lightweight and breathable and distributes the user's weight evenly over the seat and back of the chair. The chair has pneumatic height adjustment and a Kinemat® tilt that lets the body naturally pivot at the ankles, knees, and hips.

Tilt options include a tilt limiter that allows the user to select the tilt range to limit the amount of recline; a tilt limiter and seat angle that allows the user to select the tilt range and a horizontal or 5° forward seat angle; or a standard tilt.

Back-support options include PostureFit® support and an adjustable lumbar support. The PostureFit support provides a custom fit in the lower back area, below the beltline, that helps achieve healthier posture and improved lower back comfort. The user can adjust the level of support with a lever.

Arm choices include a fixed, nonadjustable option; a height-adjustable option that moves the arms 4" vertically; and a fully adjustable option that moves the arms 4" vertically and pivots the armpads 15° outward and 17½° inward.

The ZB, WS, and G8 base/frame finishes include a frame applique. These appliques are applied to an Aeron work chair's seat, back, and arms to minimize the effect of contact between the chair and a wood-edge surface. The G8 option does not include an arm coating. The applique is only available on B- and C-size work chairs.

Notes
To help determine chair size, see Aeron Chair Size/Fit Reference in Appendices. A-, B-, and C-size chairs are tested and warranted for use by persons 300 pounds and under.

For information on casters and glides, see Casters and Glides in Appendices.

PostureFit support is not available on standard tilt option.
Customer's Own Leather (COL) can be applied to armpads; requires 4 square feet. See Order Information in Appendices.

All dimensions are in inches.
This reference helps people select A-, B-, or C-size chairs when the three sizes are not available for actual test sitting. Height and weight are key indicators of suitable chair-size choice. Since the B-size chair is designed to fit a broad range of people, Herman Miller recommends it for users who fall in the A/B or B/C category. This chart applies to Aeron chairs with the extended-height-range pneumatic height-adjustment cylinder.

To determine which chair size is best, find the point of intersection for your height and weight. Aeron A-, B-, and C-size chairs are tested and warranted for use by persons 300 pounds and under.
